RAHUL M

IT & TECHNOLOGY PROFESSIONAL | DATA * AI/ML * SOFTWARE

Portfolio: https://rahul1604-m.github.io | Email: rahulmurugan1812@gmail.com
LinkedIn: linkedin.com/in/rahulm1604 | GitHub: github.com/rahul1604-m | Location: Tamil Nadu, India

PROFESSIONAL SUMMARY

MCA postgraduate skilled in Python, SQL, Excel, and Power BI, with hands-on experience in data analysis, machine learning, and visualization. Adept at deriving insights from complex data, building predictive models, and delivering technology solutions, with strong problem-solving abilities and a willingness to learn and adapt.

EDUCATION

Master of Computer Applications (MCA) — July 2024 - May 2026
Sastra Deemed University, Thanjavur — **CGPA: 7.0**

Bachelor of Computer Applications (BCA) — June 2021 - April 2024
Hindustan College of Arts and Science, Coimbatore — **CGPA: 7.4**

12th Standard (CBSE) — April 2021
Kendriya Vidyalaya, Madurai — **69%**

10th Standard (CBSE) — April 2019
Kendriya Vidyalaya, Madurai — **58%**

TECHNICAL SKILLS

Programming & Databases:	Python, SQL, MySQL, Oracle SQL
Analytics & BI Tools:	Microsoft Excel (Advanced), Power BI, Google Sheets, SAS (Learning)
Data Analysis:	Data Cleaning, Preprocessing, EDA, Statistical Analysis, Forecasting, Customer Segmentation, Time Series, Predictive Analytics
Machine Learning & Libraries:	Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, Random Forest, Decision Trees, KNN, LSTM, Classification, Re
Visualization & Platforms:	Dashboard Development, Data Visualization, Pivot Tables, VLOOKUP, XLOOKUP, Jupyter Notebook, VS Code, GitHub, Streamlit, AP
Professional Skills:	Requirement Analysis, Problem Solving, Critical Thinking, Attention to Detail, Time Management, Client Support, Stakeholder Commun
Languages:	English, Tamil, Hindi

PROJECTS

Sales Data Analysis Dashboard (Data & Analytics | Microsoft Excel, Power BI)
- Built an interactive dashboard to monitor sales, profit, and units sold, enabling stakeholder reporting and supporting data-driven client decision-making.
- Created visualizations (bar, line, pie charts) to analyze sales trends, regional performance, and product insights.
- Implemented dynamic filters for region, product, and salesperson to enable real-time, data-driven decision.

Predicting Length of Survival for Bone Cancer Patients (AI / Machine Learning | Python, Scikit-learn, KNN, Random Forest)
- Expanded machine learning models using KNN and Random Forest to predict bone cancer risk from patient health and medical test data, achieving approximately 89% classification accuracy.
- Performed data preprocessing, feature selection, and model testing; evaluated accuracy metrics to validate deployment readiness.
- Designed the system to support early clinical decision-making through predictive insights (academic ML research project).

Earthquake Prediction Using Hybrid Approach (AI / Machine Learning | Python, Random Forest, LSTM, USGS Data)
- Built a hybrid forecasting model using Random Forest and LSTM with USGS earthquake data.
- Applied sliding-window techniques for seismic feature extraction and time-series forecasting.
- Improved model performance through preprocessing, normalization, and cross-validation.

End-to-End Hybrid AI Framework for Earthquake Forecasting (AI / Machine Learning | Python, LSTM, Random Forest, Interactive Web App)
- Improved an end-to-end forecasting system to estimate the probability of major earthquakes (M >= 6.0) and maximum expected magnitude, achieving approximately 98% risk classification accuracy.
- Implemented magnitude-based resampling and sliding-window feature engineering for time-series modeling.
- Delivered an end-to-end solution deployment enabling real-time seismic risk analysis, interactive hazard visualization, and ongoing system monitoring.
- Designed system architecture for a hybrid forecasting model, selecting Random Forest and LSTM components and specifying data pipeline requirements using USGS earthquake data.
